DIABETIC DOG COMPANION

Free help for managing your dog's diabetes between veterinary appointments

---

You've just been given a lot of information

A diagnosis of diabetes can feel overwhelming. Your veterinary team has explained your dog's insulin and feeding routine, but there is much more to learn once you get home.

Diabetic Dog Companion is a free resource designed to help you with those day-to-day questions.

It was created by a dog owner who found that there was a lot more involved in managing diabetes at home than could reasonably be covered during a veterinary consultation.

The book

A practical guide you can return to whenever you need it.

It covers:

- Giving insulin safely
- Feeding and changing food
- Recognising hypoglycaemia and other emergencies
- Home blood-glucose monitoring
- Building and understanding glucose curves
- Weight and diet management
- Longer-term management and quality of life

It is written in plain English, with the underlying information and veterinary evidence explained for owners who want to understand more.

The app

The free app provides practical tools to help you manage your dog's diabetes at home.

You can use it to:

- Record glucose readings and build glucose curves
- Record weight, meals and day-to-day observations
- Calculate food quantities
- Compare foods and check nutritional information
- Record your dog's insulin information
- Help with the specific situation where your dog has eaten less than its normal meal
- Access emergency information and FAQs
- Prepare information to take to your veterinary team

USE THE APP

diabeticdogccompanion.com

No installation is needed for the web version. A Windows version is also available.

Short practical videos

App overview
A quick guided tour of everything the app can do.
youtu.be/G9sxJ3uC-SI

Changing your dog's food safely
A simple demonstration of how to change food without unnecessarily disrupting diabetes management.

Your veterinary team is still your first point of contact

Diabetic Dog Companion is intended to support, not replace, the advice given by your veterinary team.

Every diabetic dog is different. Do not change your dog's insulin dose or treatment unless you have been advised to do so.

If your dog is unwell, you are worried about its condition, or you think you may be dealing with an emergency, contact us immediately.
